# Build AI/ML pipelines in minutes!

Every company wants to add AI based features to their product today. However, do you know that most companies mention **hiring the right experts** to build AI/ML infrastructure and building pipelines as their second most critical challenge?

As a result many of them resort to cloud solutions with **high cost and no flexibility**.

Now you have more options using solutions like **Edgebricks!** We help organizations like yours automate their AI/ML project deployments and build models **10x faster** with **80% less cost** than alternatives.

- Our innovative approach converts a set of commodity servers, GPUs, and disks into AI/ML infrastructure. This infrastructure comes pre-built with various AI/ML pipelines to build object detection, NLP, recommendation systems and other models. Your AI team gets access to AI tools using a simple web console, and your DevOps team can do essential cloud-based monitoring and capacity planning.

- With our solution, you can deploy an **object detection pipeline in just 15 minutes**, making it the fastest option on the market. Additionally, our solution can lower your costs by 80% compared to tools like AWS Sagemaker, allowing you to allocate more resources towards other important aspects of your organization.

- **The infrastructure can be hosted by your team or us**

Edgebricks Unique Architecture

AI/ML App Store

We have a built in AI/ML app store using which you can deploy applications for various tasks done by your AI team within minutes. We have automated most of the open source applications but you can deploy others as well.

Labeling

DagsHub   InfuseAI   CVAT

Synthetic data

YData

Model development

parity   mindsdb   MLRun

Model testing/validation

Pachyderm   ModelOp   CLEARML

Orchestration

guild.ai   Kubeflow   SELDON

Hyperparameter tuning

CLEARML   H2O.ai

Model inference

ZenML   mlflow   Hugging Face

Monitoring/observability

FeatureBase   OctoML   BENTOML

Key Benefits

Setup AI/ML infrastructure and pipeline in few hours

Lower total cost of ownership by 80%

Provide self-service to AI dev team

Provide control, visibility and low opex to devops team

Don't let high costs and slow deployment times hold you back from reaching your AI/ML goals. Contact us today to learn more about how we can help your organization automate your AI/ML project deployments and build models faster and more efficiently.
